

Tárgyleírás angol nyelvű képzés tárgya esetén

Tárgy neve: Mathematical foundation of cryptocurrencies L.

Tárgyfelelős neve: Seres István András

Tárgyfelelős tudományos fokozata: PhD

Tárgyfelelős MAB szerinti akkreditációs státusza: AT

Az oktatás célja angolul / Aim of the subject:

Knowledge

- In order to be able to perform their work in an innovative way and do research (when necessary) in their own IT specialisation, they have comprehensive and up-to-date knowledge of general mathematical and computing principles, rules and relationships, particularly in the following areas: algebraic, linear algebraic and number theory methods and applications; algorithmic methods in mathematics, formal models and tools in computing science, complexity and efficiency theory of algorithms, and special algorithms of application fields.
- They have comprehensive and up-to-date knowledge and understanding of the general theories, contexts, facts, and the related concepts of IT, particularly in the areas of computer networks, information theory, cryptography.
- They have comprehensive and up-to-date knowledge of the principles, methods, and procedures for designing, developing, operating, and controlling IT processes, particularly in the areas of the design, construction and management of cryptography, data security and data protection.
- They have a high level of fluency in the language of IT – including its professional vocabulary and its characteristic features of expression and composition – both in their mother tongue and in English, at least.

Abilities:

- They are able to apply their mathematical, computer science and informatics skills in a novel way in order to solve tasks in IT research and development.
- They are able to formalize complex IT tasks, to identify and study their theoretical and practical background and then to solve them.
- They are able to initiate collaboration and work in a team as well as on projects with IT or other professionals.
- They are able to professionally use scientific and technical information sources to obtain knowledge necessary for solving a problem, and to critically interpret and evaluate it.

Attitude:

- They follow professional and technological developments in their IT field.
- They share their knowledge and consider it important to disseminate professional IT results.

Autonomy, responsibility:

- They take responsibility for their professional decisions made in their IT-related activities.

Az oktatás tartalma angolul / Major topics:

In this course, students will learn the basics of cryptocurrencies and blockchain technologies. This course covers an introduction to the many interdisciplinary fields that cryptocurrencies build upon, such as consensus algorithms, (applied) cryptography, security and privacy, and decentralized finance. The course covers the following topics:

- Bitcoin nuts and bolts, Merkle trees
- Classical consensus: network and adversarial models and properties of secure state machine replication
- Consensus in the internet setting: Nakamoto consensus and sybil resistance
- Accountability and incentives in consensus: proof-of-stake
- Ethereum, programming in Solidity
- Decentralized exchange
- Miner extractable value and NFT marketplaces
- Privacy: de-anonymizing the blockchain and mixing
- zkSNARKs: what are they and how are they used?
- Constructing a pre-processing SNARK from polynomial commitments
- The Plonk SNARK
- Scaling the blockchain with rollups and zk
- Fair Data exchange and decentralized data markets

A számonkérés és értékelés rendszere angolul / Requirements and evaluation:

exam
